Race Site

• Tooth movement can be visualized through the ClinCheck® software.

• Aligners allow for normal brushing and flossing, also that are generally preferred by conventional braces.

• Aligners do not have the metal wires or brackets associated with conventional braces.

• The wearing of aligners may improve oral hygiene habits during treatment.

• Invisible aligners may notice improved periodontal (gum) health during treatment.

Procedure

You will undergo a routine orthodontic pre-treatment examination including x-rays and photographs. Your doctor will take impressions of your teeth and send them along with a prescription to the Aligner.

Aligner technicians will follow your doctor's prescription to create a ClinCheck® software model of your prescribed treatment. Upon approval of the ClinCheck treatment plan by your doctor, Aligner will produce and mail a series of customized aligners to your doctor.
